All in one module
Easy installation

Large display

Two heating loops,
up to five heating zones

Interior
space saving

Automatic summer
winter operation

Class A, B, and C
applications

Use with
Compact 5 or
10 burner

RVC compatible

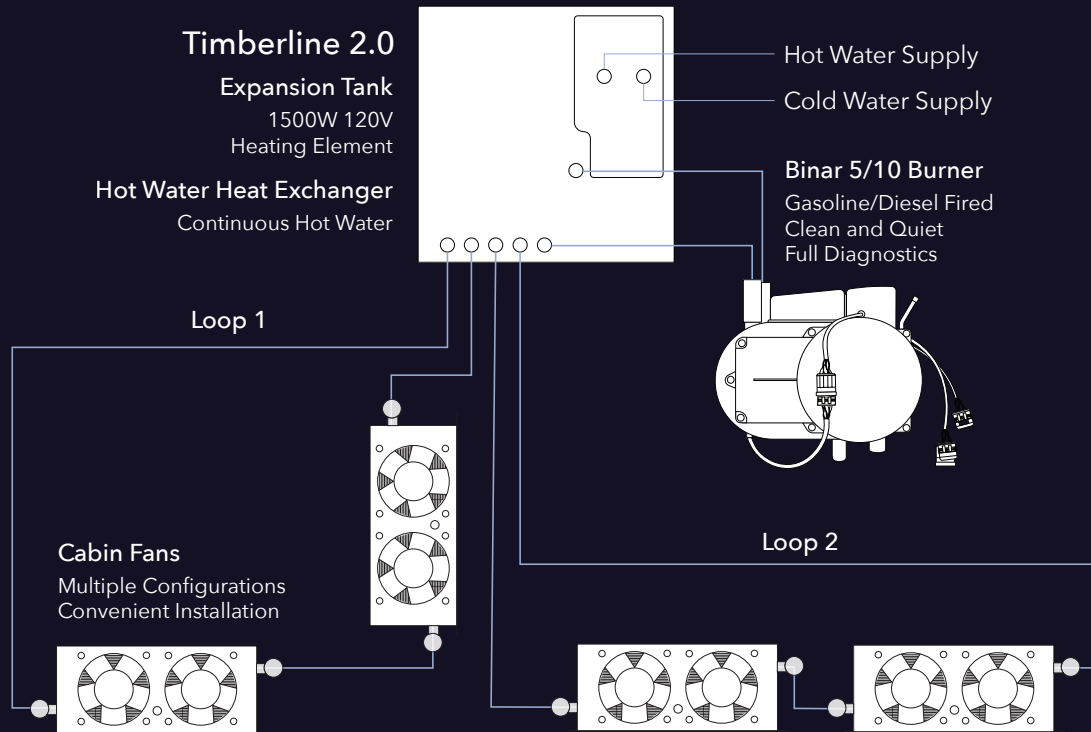

Quiet Heat

Timberline 2.0 heat and hot water is generated by the Binar 5 or 10 Burner. Both burners are powerful but quiet diesel or gasoline heating units made for the most adverse conditions. They heat the glycol solution which is silently circulated through the interior of the living space by quiet air handlers that provide soft radiant heat.

The glycol is also circulated through an instantaneous water heat exchanger which produces continuous hot water for showers and kitchen use. By using the

diesel or gasoline burner coupled with 120V electric element support, Timberline 2.0 provides efficient comfort whether dry camping or plugged into shore power.

The Timberline touchscreen digital panel located inside the RV gives you full control of your interior temperature. The controls are intuitive and easily allow you to adjust how hard or soft you want the heat to distribute and whether you want to utilize your fuel source or electric only.
